In the first table we have a team player that has a unique uniform number that includes city, coach. In the second table we have a unique uniform number and school that has game date and game score. This way we separated game date and score so don't have to change the entire time if the new score. Third table we separated school with record wins and losses, so when we add it to the table we don't have to change the whole table and add score as well. This way is much easier. We would just add wins and losses. Last table has a school and team name. This is separated and we not likely be touched. This way we can add team name when we add school to any of these tables.
